

Features :

- Xeritech Valve Boxes are used for the purpose of protecting the irrigation valves that are laid on the ground or on the ground.
- Production is carried out in accordance with ISO 9001:2015 quality requirements.
- It is resistant to high strengths.
- It protects the valve against freezing in winter.
- The fact that the covers can be opened easily ensures easy access to the valves.
- In order to ensure easy assembly, the pipe sections were drawn and the points were determined separately according to the pipe diameter.
- Body color is BLACK, Top cover is GREEN
- The product is produced from PP raw material.
- All sizes provide significant cost advantage in transportation as they are light and nestable.

XT-VBRND6"-Round Series

- There are 2 side openings on the body and it is suitable for pipes with a diameter of 2".
- The grooves in the part of the body that touch the ground increase the strength of the box.
- The opening on the cover surface allows the cover to be lifted easily with a finger or a metal object.

XT-VB 10"- RECTANGULAR Series

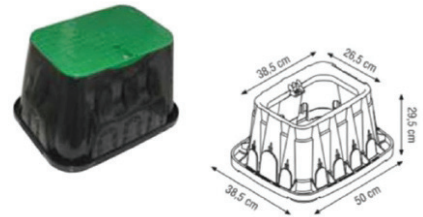

- There are 2 side openings on the body and it is suitable for pipes with a diameter of 2".
- The grooves in the part of the body that touch the ground increase the strength of the box.

The opening on the cover surface allows the cover to be easily opened by moving it clockwise with the help of two fingers and to be locked by moving in the opposite direction.

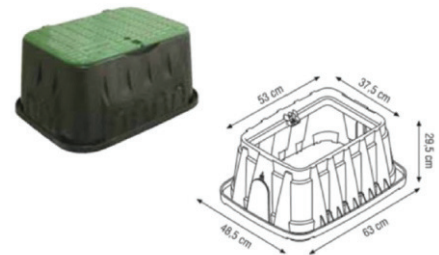

XT-VB12"-RECTANGULAR STD Series

- There are pipe transitions at 3 points from the sides on the body and it is suitable for up to 2" diameter pipes.
- There is a shovel access slot on the lid opening and it is used to easily remove the lid.
- There is a plastic lock system on the cover that fits into the bolt slot.
- Behind the cover, there are two hinges connected to the body that allow the cover to be opened and closed easily.
- These hinges also reduce the risk of the lid being lost.

XT-VB14"-JUMBO Series

- There are pipe transitions at 4 points from the sides on the body and it is suitable for up to 2" diameter pipes.
- There is a shovel access slot on the lid opening and it is used to easily remove the lid.
- There is a plastic lock system on the cover that fits into the bolt slot.
- Behind the cover, there are two hinges connected to the body that allow the cover to be opened and closed easily.
- These hinges also reduce the risk of the lid being lost.
